

-
- What N2O kits are available or known to work?

[Zex](#)

[Venom](#)

[Nitrous Oxide Systems \(NOS\)](#)

[Nitrous Express](#)

- How do I install my ZEX Kit?

Brendan has another fine [ZEX Install Guide](#)

- What other Information on Nitrous is there?

From Brendan, the misconception about n2o is that it is explosive, dangerous etc etc, n2o is funny gas, dentists use it, welding shops have it, it is an industrial product use as an oxidant, it is VERY stable until heated to 1300 degrees when it separates into n and O, this is when it provides more oxygen than regular air due to greater density than air (more n2o than air in given space by weight blah blah blah). It is legal to own, to buy, but not to drive around with due to the high pressure container it is in. The container is under pressure above 1000 psi and in a car accident you have trouble. Cops will not care if you have Nitrous Oxide going to/coming from a legal track but they do if they pull you over speeding etc, Nitrous Oxide has no other automotive use other than quick hp gains (or making the driver giddy). Bottle closed they may forgive, open and you have hell to pay.
